Taxonomy for Information Technology Theory Assessment

Level	Weight	Description	Examples
1	30%	Knowledge, Comprehension	Questions where the learner is required to recall knowledge from the Grade 10, 11 and 12 IT syllabus: Recall, define, explain, identify, describe, match columns, label.
2	40%	Application and Analysis	- Compare two solutions and give a recommendation (simple scenario). - Questions where the learner analyses a scenario and makes justified suggestions: - Suggest a network architecture given the requirements of users. - Questions where the learner is required to apply existing knowledge to a given scenario - List hardware and software specifications given a user's requirements.
3	30%	Synthesis Evaluation, Creativity, Problem solving	- Analyse an algorithm and suggest improvements. - Analyse or compare data structures. - Compare two solutions and give a recommendation (scenario which requires considerable in-depth thinking). - Questions where the learner must evaluate or make a judgement based on given criteria or content: - Analyse the given information and provide an opinion that is substantiated with the correct facts.
